DIMENSION and TECHNICAL FEATURES

width:	80 cm
height:	96 cm
depth:	77 cm
brushes diameter:	15 cm
brushes motor power:	0,25 kw
compressor power:	1,5 kw
weight:	120 kg

PUSH BUTTON STATION

- The machine is equipped with two brushes put beside, the first one for the cleaning of the sole and the other one for the cleaning of the shoe upper part.
- Through a selector placed in the centre of the push button station, choose the part of the shoe to be cleaned (sole or shoe upper part) and then, pressing at the same time the two-way push buttons, choose also the rotation direction (double-way rotation for the sole and only towards the lower part for the shoe upper part). Even if you release only one of the two push buttons, the machine stops.
- The INVERTER technology allows to obtain different speeds for the sole and the shoe upper part. The speeds are preset during the start-up and before the delivery of the machine.
- Through the double-way rotation the operation-life and the cleaning efficiency, is many times longer than traditional shoe polishing machines.
- The transmission system of the brushes is by toothed belt and does not need maintenance.
- The machine is equipped with a container for the dirt placed under the brush by the side of the sole, and with a non-slip plate under the brush by the side of the shoe upper part.
- Machine is manufactured in galvanized steel, and the surface is protected with a special powder coating stabilized in the oven..
- In order to reduce the noise emissions, the highly silent compressor is positioned inside a guard. The result allows one to use the machine in any given area of the Golf Club.
- The compressor is a high quality LUBRICATED type, and the maintenance is practically non-existent.
